

Virtual dissection in VH Dissector of muscle derivatives of Pharyngeal Arch I demonstrating contiguity of innervation field of the trigeminal nerve (Day 2 dissection in Head & Neck Section)

Clinical Gross Anatomy

Advanced Dissection-Based Modular Course With Clinical Practica
Using Soft-Embalmed (Modified Thiel Method) Cadavers

May 30 — July 21, 2023

Course Director: Noel T. Boaz, Ph.D., M.D.

New College Institute,
Baldwin Building, 191 Fayette Street
Martinsville, VA 24112

Lecture

New College Institute,
Fayette Street Laboratory
31 Fayette Street
Martinsville, VA 24112

Laboratory

The ICSM certificate course in Clinical Gross Anatomy is an intensive, advanced eight-week summer course emphasizing an onto-phylogenetic approach in lecture, mirrored by developmental segmental dissection in laboratory, made possible by the flexibility of the soft-embalmed cadaver.

The course covers all systems and regions of the body offered in four sections, any one or more of which can be taken separately. Clinical applications are emphasized. For advanced medical students, medical practitioners, and faculty. For more information or to register for the course contact admin@integrativemedsci.org.
